Fuel Injection Supplement

to the

OWNER'S HANDBOOK

The information contained in this handbook applies to a range of vehicles and not to a specific vehicle. For the specification of a particular vehicle owners should consult their distributor or an authorised dealer. The manufacturer, Aston Martin Lagonda Limited reserves the right to alter specifications with or without notice, and at such times and in such manner as is thought fit. Major as well as minor changes may be involved in accordance with the manufacturer's policy of continued development. Whilst every effort is made to ensure the accuracy of the particulars contained in this supplement, neither the manufacturer nor the distributor or dealer, by whom the supplement was supplied, shall in any circumstances, be held liable for any inaccuracy or the consequences thereof.

INTRODUCTION

Fundamental changes have been made in connection with the fuel system of the Aston Martin V8 Saloon, Volante, certain Vantage models and Lagonda cars. These models are now equipped with a fuel-injection system.

This system is electronically controlled. It monitors information which is fed into it from strategically placed sensors in the engine and fuel systems. It analyses the conditions, determines the requirements and automatically adjusts the fuel settings to give optimum performance.

Those owners whose cars are fitted with this system are advised not to make any adjustments to the fuel injection components. Certain associated components, however, may require attention and relevant details are given in the Servicing Section.

Any variations to the specification of the car are given in the section headed 'Specification'. This lists only those items which have been changed.
